### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

**DETAILED ACTION**

***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 18, the prior art fails to teach a combination of the steps of:  
accessing a port index value associated with the port;  
deriving a virtual local area network (derived VLAN) value in response to said one or more indicia of frame type and said port index value, in the specific combination as recited in the claim.

Regarding claims 19, the prior art fails to teach a combination of the steps of:  
a port to receive a frame (received frame), said port associated with an index value, said received frame containing one or more indicia of frame type, said one or more indicia of frame type including an indicia of a protocol type;

a parsing engine to derive a virtual local area network (derived VLAN) value in response to said one or more indicia of frame type and said index value, in the specific combination as recited in the claim.

Regarding claims 20, the prior art fails to teach a combination of the steps of:  
means for accessing an index value associated with the means for receiving a frame;

means for deriving a virtual local area network (derived VLAN) value in response to said one or more indicia of frame type and said index value, in the specific combination as recited in the claim.

Regarding claims 24, the prior art fails to teach a combination of the steps of:

combining the protocol code with the VLAN value to produce a mapping address, and

accessing a memory structure with the mapping address to obtain the derived VLAN value, in the specific combination as recited in the claim.

Regarding claims 26, the prior art fails to teach a combination of the steps of:

a parsing engine to derive a virtual local area network (derived VLAN) value, wherein the parsing engine is configured to combine the protocol code with the VLAN value to produce a mapping address and to access a memory structure with the mapping address to obtain the derived VLAN, in the specific combination as recited in the claim.

Regarding claims 32, the prior art fails to teach a combination of the steps of:

concatenating the protocol code together with the VLAN value to produce a mapping address;

applying the mapping address to a memory structure to obtain a derived VLAN value that is based upon both the frame's protocol type and the VLAN value associated with the input port, the derived VLAN value to differ from at least one other derived VLAN value for another frame received on the input port, but having a different protocol type, in the specific combination as recited in the claim.

Regarding claims 36, the prior art fails to teach a combination of the steps of:

an engine to concatenate the protocol code together with the VLAN value to produce a mapping address, and to apply the mapping address to a memory structure to obtain a derived VLAN value that is based upon both the frame's protocol type and

VLAN value associated with the input port, the derived VLAN value to differ from at least one other derived VLAN value for another frame received on the input port, but having a different protocol type, in the specific combination as recited in the claim.

Regarding claims 39, the prior art fails to teach a combination of the steps of:

in response to the protocol type indicating a particular protocol type, parsing the source address to obtain a subnet value;

applying the subnet value to a memory structure to map the subnet value to a derived VLAN value, the derived VLAN value to differ from at least one other derived VLAN value for another frame received on the input port, but having a different subnet value, in the specific combination as recited in the claim.

Regarding claims 41, the prior art fails to teach a combination of the steps of:

an engine to, in response to the protocol type indicating a particular protocol type, parse the source address to obtain a subnet value, and to apply the subnet value to a memory structure to map the subnet value to a derived VLAN value, the derived VLAN value to differ from at least one other derived VLAN value for another frame received on the input port, but having a different subnet value, in the specific combination as recited in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to TOAN D. NGUYEN whose telephone number is (571)272-3153. The examiner can normally be reached on M-F (7:00AM-4:30PM).
